

pcdl: PhysiCell data load

For wet-lab scientists and Julia-, Matlab-, R-, Python-bioinformaticians.

Elmar Bucher, Ph.D. Student

Intelligent Systems Engineering
Indiana University

2025-11-14

Concept I

- ★ `pcdl` provides an operating system independent (Windows, MacOSX, Linux), set of commands to load `PhysiCell output` into `Python3` or transform `PhysiCell output` into more widely used data formats.
- ★ `pcdl` is not “yet another analysis software”; it is just a powerful interface to analysis software!

Concept II

PhysiCell output

```
mcds TimeSeries
  initial.xml
  initial.svg

mcds TimeStep
  output00000000.xml
  output00000000_cells.mat
  output00000000_microenvironment0.mat
  output00000000_cell_neighbor_graph.txtl
  output00000000Attached_cell_graph.txt
  output00000000_Spring_attached_cell_graph.txt
```

pcdl output

```
basic PhysiCell
  output00000000_cell_type.jpeg
  output00000000_substrate.jpeg
  timeseries_cell_cell_type_count.jpeg
  timeseries_conc_substrate_value_nanmean.jpeg

VTK
  output00000000_cell.vtp
  output00000000_conc.vtr
```

```
wet-lab scientist
  output00000000_substrates_celltypes_ID.ome.tif
  timeseries_substrates_celltypes_ID.ome.tif
```

```
bioinformatician
  output00000000_cell.csv
  output00000000_conc.csv
  timeseries_cell.csv
  timeseries_conc.csv

  timeseries_cell_attribute_minmax.json
  timeseries_conc_attribute_minmax.json

  output00000000_neighbor.gml
  output00000000Attached.gml
  output00000000_Spring.gml

  output00000000_cell_maxabs.h5ad
  timeseries_cell_maxabs.h5ad
```

				<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	(<input checked="" type="checkbox"/>)			<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

<input checked="" type="checkbox"/>		(<input checked="" type="checkbox"/>)		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
-------------------------------------	--	---	--	-------------------------------------	-------------------------------------	-------------------------------------	-------------------------------------

			<input checked="" type="checkbox"/>				
<input checked="" type="checkbox"/>							
		<input checked="" type="checkbox"/>					
		<input checked="" type="checkbox"/>					

Background and history

- ★ Evolved from PhysiCell-Tools python-loader `pyMCDS.py`.
 - `TimeStep` class.
 - `TimeSeries` class.
 - Command line entry points.
- ★ Standing on the shoulder of giants: core python, `anndata`, `bioio`, `matplotlib`, `neuroglancer`, `numpy`, `pandas`, (`requests`), `scikit-image`, `scipy`, `vtk`.
- ★ `pip install pcdl`

Run pcdl

- ★ Most commands run on whole time series and single time steps.
- ★ Every command has a docstring that explains all possible input parameters, output options, and the purpose of the function.

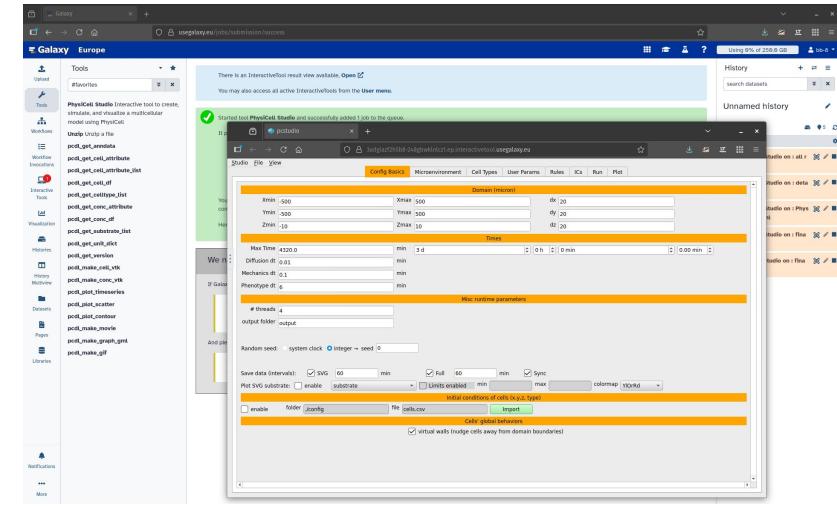

Command line:

```
pcdl_get_cell_df output/output00000000.xml  
pcdl_get_cell_df -h # getting help on the fly
```

Python3:

```
import pcdl  
  
mcds = pcdl.TimeStep('output/output00000000.xml')  
df_cell = mcds.get_cell_df()  
df_cell.to_csv('output/output00000000_cell.csv')  
  
help(mcds.get_cell_df) # getting help on the fly
```

Galaxy (<https://usegalaxy.eu/>):

PhysiCell 2D and 3D basics

★ Data format:

- 2D vector graphics: `svg`
- 2D raster graphics: `jpeg`, `png`, `tiff`
- 2D movies: `gif`, `mp4`
- 3D `vtp` visualization toolkit poly data for cells.
- 3D `vtr` visualization toolkit rectilinear grid for substrate.
https://docs.vtk.org/en/latest/vtk_file_formats/vtkxml_file_format.html

★ Analysis software:

- default software installed with your operating system.
- `physicell studio`
- `paraview`

★ Demo:

- https://github.com/elmbeech/physicelldataloader/blob/master/man/TUTORIAL_paraview.md
- `pcdl_get_version`, `pcdl_get_unit_dict`
- `pcdl_plot_scatter`, `pcdl_plot_contour`, `pcdl_plot_timeseries`
- `pcdl_make_gif`, `pcdl_make_movie`
- `pcdl_make_cell_vtk`, `pcdl_make_conc_vtk`
- `pcdl_get_celltype_list`, `pcdl_get_substarte_list`, `pcdl_get_cell_attribute_list`

Wet-lab scientist

★ Data format:

- `ome.tifff`
<https://www.openmicroscopy.org/>

★ Analysis software:

- Fiji ImageJ, Icy, Napari, and QuPath.
- Neuroglancer.

★ Demo:

- https://github.com/elmbeech/physicelldataloader/blob/master/man/TUTORIAL_fijiimagej.md
- https://github.com/elmbeech/physicelldataloader/blob/master/man/TUTORIAL_neuroglancer.md
- `pcdl_make_ome_tiff`
- `pcdl_render_neuroglancer`

Julia bioinformatician

★ Data format:

- jpeg, png, tiff (2D image):
- ome.tiff: <https://github.com/tlnagy/OMETIFF.jl/issues/112>
- vtk: <https://github.com/JuliaVTK/ReadVTK.jl>
- csv (tabular)
- json (non-tabular)
- gml (graph modeling language): <https://github.com/JuliaGraphs/GraphIO.jl/issues/46>
- h5ad (anndata)

★ Analysis software:

- using FileIO # Images
- using CSV # DataFrames
- using JSON3
- using GraphIO # Graphs
- using Muon

★ Demo:

- https://github.com/elmbeech/physicelldataloader/blob/master/man/TUTORIAL_julia.md
- pcdl_get_cell_attribute, pcdl_get_cell_attribute
- pcdl_get_cell_df, pcdl_get_conc_df
- pcdl_get_anndata

R bioinformatician

★ Data format:

- jpeg, png, tiff
- ome.tiff # RBioFormats
- csv (tabular)
- json (non-tabular)
- gml (graph modeling language)
- h5ad (anndata)

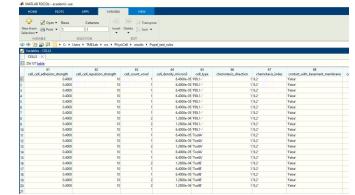

★ Analysis software:

- library("jpeg")
- library("png")
- library("tiff")
- library("RBioFormats")
- library("jsonlite")
- library("igraph")
- library("schard") # anndata

★ Demo:

- https://github.com/elmbeech/physicelldataloader/blob/master/man/TUTORIAL_r.md
- pcdl_make_graph_gml neighbor attached spring

Matlab bioinformatician

A screenshot of the Matlab Data Browser interface. The browser shows a table with multiple rows and columns. The columns are labeled with names such as 'Cell ID', 'Time', 'Concentration', 'Intensity', and 'Label'. The data appears to be a time-series measurement for multiple cells, with each cell having a unique ID and multiple time points. The browser has a standard Windows-style menu bar at the top.

★ Data format:

- jpeg, png, tiff
- vtk # <https://www.mathworks.com/matlabcentral/fileexchange/94993-vtktoolbox>
- ome.tiff # <https://docs.openmicroscopy.org/bio-formats/5.7.1/developers/matlab-dev.html>
- csv (tabular)
- json (non-tabular)
- gml (graph modeling language) # <https://www.mathworks.com/matlabcentral/fileexchange/159001-matlab-igraph>

★ Analysis software:

- img = imread("output/timeseries_cell_cell_type_count.jpeg")
- vtkimg =
- omeimg =
- df_cell = readtable("output/timeseries_conc.csv")
- struct_conc = jsondecode(fileread("output/timeseries_conc_attribute_minmax.json"))
- g =

★ Demo:

- https://github.com/elmbeech/physicelldataloader/blob/master/man/TUTORIAL_matlab_octave.md
